Office of the Washtenaw County Medical Examiner

To: Washtenaw County Board of Commissioners, and the Citizens of Washtenaw County

From: Bader J. Cassin, M.D., Chief Medical Examiner

The laws of the State of Michigan assign the responsibility for determining the cause and manner of unexpected deaths in each county to the medical examiner. The Washtenaw County Medical Examiner upholds these laws and accepts this responsibility with full commitment to a consistent high quality service, which is recognized as a model throughout the State of Michigan. Every reported death is investigated thoroughly, frequently with the cooperation of law enforcement agencies and health care personnel in Washtenaw County as well as around the State of Michigan. Because Washtenaw County is a principal medical referral center, our inquiries often lead necessarily to distant sources of information regarding the circumstances and causes of injury. The results of these death investigations provide valuable information, which is used in professional education and by the criminal justice system, public health departments, families of the deceased, and other concerned persons.

While the medical examiner staff of investigators, physicians and support persons is primarily concerned with the circumstances surrounding unexpected deaths, our concern for the living is reflected in our regular reviews of all childhood deaths with concerned and involved state and county agencies, as well as our reviews of all deaths of persons receiving community mental health services. Staff members likewise donate many hours to emergency management and disaster preparedness as well as to professional and local public education programs for injury investigation, treatment and prevention.

The maintenance of a properly prepared and effective death investigation system necessarily involves periodic investigator recruitment and continuing education. These regular efforts, along with the requirements of our combined investigator activities, are coordinated by our dedicated support staff.

I want to thank the Washtenaw County Board of Commissioners and the County Administration for their continued encouragement and support of this program, which enables the medical examiner staff to provide this necessary and valuable service to the citizens of Washtenaw County. I respectfully submit this annual report to demonstrate the expanding scope and sophistication of this professional and continued cost-effective service. With you, I take great pride in the development of this office during the past decade. I welcome the opportunity to discuss any aspect of this report with you.

To: Washtenaw County Board of Commissioners, and the Citizens of Washtenaw County

From: Roger D. Simpson, Vice President
Huron Valley Ambulance

Our 2005 annual report, once again, reflects the increasing number of death investigations done by our staff. We have again surpassed the number of investigations performed over the previous year. Our new Medical Examiner’s facility/morgue project continues to be on hold due to various other challenges facing County government at this time. Our staff continues to do an excellent job in providing the vital and necessary contracted Medical Examiner investigative and administrative services for the citizens of our communities. We continue to work closely with the law enforcement agencies, funeral homes, hospitals, and many others that we come in contact with on a daily basis. Huron Valley Ambulance remains committed to providing these contracted services on behalf of Washtenaw County in the most professional and cost efficient manner possible.

Thank you for taking the time to look over our 2005 activities. Please do not hesitate to contact us should you have any questions, or if we can assist you in any way.

Criteria for Medical Examiner Cases

Deaths which should be reported to the medical examiner include all those which result, either directly or indirectly, from injury, whether by accident or intended, self-inflicted or caused by another person. Injury includes poisoning and drug ingestion or injection. The interval (passage of time) between the injury and the death, whether it be minutes or months, does not change the requirement for reporting the death.

Deaths due to injury include the following:

♦ Alcohol intoxication
♦ Asphyxiation (smothering, hanging, strangulation)
♦ Blunt impacts (by any object)
♦ Chemical exposure, at home or in the workplace
♦ Cutting and stab wounds
♦ Drug ingestion or injection
♦ Drowning (submersion in any amount of liquid)
♦ Electrocution (by lightning or wiring)
♦ Falls from any height
♦ Fire, explosion, or exposure to heat or smoke
♦ Firearms (gunshots)
♦ Intrauterine deaths associated with maternal trauma
♦ Pedestrian impacts (by any vehicle)
♦ Vehicle crashes or rollovers (driver or passenger)

Unexpected and unexplained deaths of persons presumed to have been in good health or for whom no history of serious medical problems or progressive primary disease is known should also be reported to the medical examiner. Deaths in this category are identified by reference to a treating physician, the presence of prescribed medication, family members or friends familiar with the person, or persons present at the time of death.

Deaths occurring in a location other than a healthcare institution (hospital, clinic, nursing care facility) where there is a physician or nurse present need not be reported to the medical examiner if history of serious disease is known. In these cases the primary care or treating physician must be able and willing to determine that the known disease(s) is the sole cause of death (and is therefore a “natural” death). Other deaths which do not need to be reported are those occurring in a residence where a physician or nurse is in attendance and know that the death has resulted from a chronic illness. The funeral director of the family’s choice may be notified in these situations. Otherwise, the medical examiner must be notified of the death.
Criteria for Medical Examiner Cases (Continued)

Michigan law also requires, in the interest of public health and safety, the reporting to the medical examiner of all deaths of persons in the following circumstances:

**Unexpected infant deaths:** Deaths occurring during the first two years of life, without obvious serious disease being present.

**Deaths while in custody:** The death of any prisoner in a jail or prison, or any person in the custody of a law enforcement officer or agency, whether by known or unknown cause(s). Hospitalized prisoners are also “in custody”.

**Deaths resulting from abortion:** The death of any woman resulting from or following an abortion or attempted abortion, whether self-induced or otherwise.

**Found bodies:** Bodies (whether or not identified) found within county boundaries, which are known or suspected to have come to their death through any of the “unnatural” means described above.

**Deaths in the workplace:** Deaths occurring to persons in their place of employment.

Deaths during medical procedures, whether diagnostic or therapeutic, in any location, must be reported to the medical examiner if the reason for the procedure is any of the causes listed above or if the death is unexpected and/or results from the procedure itself.

Any of the situations described above may require an autopsy as a part of the death investigation. Autopsies are done only if the information (or evidence) available is insufficient for accurate death certification (or effective prosecution).
Counties Serviced by Washtenaw County

County of Residence
Residence outside of MI = 24

County of Injury
Injury outside of MI = 2
Location unknown = 10
Manner of Death (Table 3)
Manner of death is classified into one of the five categories listed below. Indeterminable deaths are those deaths where there is insufficient information about the circumstances surrounding the death to make a ruling; e.g., most unwitnessed deaths due to illicit drug(s) are indeterminable.

Cause of death is defined as any injury or disease that produces an irreversible physiological condition.

Unnatural Causes of Death (Table 4)
Other = found bones, hypothermia, therapeutic, asphyxia, suffocation, bee sting, strangulation, shaken, unknown
Many of the unexpected deaths reported to the medical examiner’s office ultimately are determined to be natural events (i.e., due to disease). This chart exhibits the various organ systems primarily involved in the cause of death.
2005 INFANT DEATHS = 32

Cause of Death (Table 6)
(2 years of age or less)

Washtenaw County residents = 6

History of Infant Deaths (Table 7)
2005 Accidental Deaths = 174

Cause of Death (Table 8)
Other = therapeutic, asphyxia, suffocation, blunt trauma, drug overdose, hypothermia, unknown

Explanation of Falls
The potential for accidental falls increases with age. One-third of the trauma-related deaths are due to the injuries sustained in a fall.

Motor Vehicle Accidents = 75 (Table 9)

34 of the MVA's occurred in Washtenaw County.
The remainder occurred in adjacent counties.
2005 Homicide Deaths = 13

Cause of Death (Table 10)
Blunt trauma = beating
Firearm = pistol, rifle, shotgun

5 of these homicidal assaults occurred in Washtenaw County.
The remainder were transferred to Washtenaw County hospitals.
2005 Suicide Deaths = 33

Cause of Death (Table 11)
Deaths are certified as suicide when the injury is self-inflicted and there is a clear indication of intent.

![Pie chart showing the percentage of suicide methods used by age group.]

Methods Used by Age of Deceased (Table 12)

28 of the suicides originated in Washtenaw County.
The remainder were brought to Washtenaw County hospitals.
Testing for the presence of abuse and many therapeutic drugs is done in most death investigations. Deaths are attributed to a drug or combination of particular drugs if there is no other reasonable explanation.
2005 Demographic Statistics

Sex of Deceased (Table 14)
Indeterminable: skeletal remains (animal/human)

Ethnicity of Deceased (Table 15)
Other: Asian; American/East Indian; Hispanic
Unknown: skeletal remains (animal/human)

Age at Death (Table 16)
Unknown: skeletal remains (animal/human)
2005 Medical Examiner Autopsies

Total Autopsies = 303 (Table 17)
- Internal = complete autopsy
- External = complete examination of body surfaces
- Limited = restricted internal examination

ME Cases Requiring Autopsies (Table 18)
Not all deaths investigated require an autopsy, often because of extensive medical history.
57% of reported deaths become ME cases and 64% of ME cases require autopsies.

Autopsy Comparison (Table 19)
From previous years, 1998 through 2005
History of Medical Examiner’s Office
1965 to 2005

Manner of Death (Table 20)

Type of Injury (Table 21)
