

WHAT TO KNOW ABOUT COVID-19 TREATMENTS

(AKA COVID-19 therapies or COVID-19 therapeutics)

If you test positive for COVID-19, treatment options may be available to you.
Treatments can reduce the risk of becoming seriously ill or hospitalized.

HOW TO GET TREATMENT:

- If you test positive for COVID-19, talk to your primary care provider or an urgent care provider right away to see if you qualify for treatment. Don't delay: treatment must be started within 5 to 7 days of when you first develop symptoms.
- This is especially important for those who are high risk and/or are not up-to-date on their COVID-19 vaccines.
- Different treatments have different qualifications like age, weight, date since symptoms started, etc.
- You must have a prescription from a health care provider to get treatment.

IMPORTANT NOTES

- COVID-19 treatments are not substitutes for COVID-19 vaccines. If you aren't up-to-date on your vaccines, get vaccinated once you've recovered and are done with isolation.
- You are still considered to be contagious while using treatment. Follow isolation guidance while using treatment.
