

# COVID Vaccine Status of Washtenaw County Residents with COVID-related Hospitalization (by month of admission) (3/1/21 to 7/28/22)

includes Washtenaw County hospitalized confirmed and probable COVID-19 cases (N=2068)

Vaccination status definitions reflect the definition at the date of archival. Please note that vaccination status definitions may no longer reflect the current vaccination standards.

- Unvaccinated = no vaccination received to date or symptom onset occurred less than 2 weeks from first vaccine dose.
- Partially vaccinated = symptom onset occurred between two weeks after the first vaccination dose and two weeks after the second dose (Pfizer and Moderna).
- Completed Primary Series = symptom onset more than two weeks after second dose of the Pfizer or Moderna vaccine series or symptom onset more than two weeks after the Janssen vaccine.
- Fully Vaccinated + Booster = symptom onset after case received primary vaccine series and are 14 days past an additional dose of vaccine (ex.3 mRNA doses or 2 J&J doses)

**This graph is no longer being updated. The contributing and protective factors for severe illness and hospitalization for COVID at this point in the pandemic are more complex and not represented well in these data. For example, many “primary series + booster” hospitalizations have occurred in people who are more than six months out from a booster and are not considered up-to-date on vaccines. In addition, “up-to-date” status for vaccination continues to change as we respond to the shifting nature of the pandemic.**
